TEST REPORT
No. 11 - 147

Test object : Neutral earthing resistor

Type : RP

Design : SDS-6812

Serial No. : CR034553/2-1

Ratings

Rated system voltage : 11 kV

Rated continuous current : 0 A

Rated resistance at 54°C : 15,8 Ω

Manufacturer

: Cressall Resistors Ltd
Evington Valley Road, Leicester, LE5 5LZ
United Kingdom

Test performed

: Short-time current test
Customer's request based on IEEE 32-1972, section 4.6 and
Cressall Test Acceptance Criteria, Issue B

Customer

: Cressall Resistors Ltd
Evington Valley Road, Leicester, LE5 5LZ
United Kingdom

Date of test

: 02. 08. 2011

♦ Interpretation of results:

The test object passed successfully the short-time current test, no visible damage appeared.

THIS TEST REPORT IS CONFIDENTIAL AND SHALL NOT BE PASSED OVER OR TRANSFERRED TO ANY THIRD PARTY WITHOUT WRITTEN APPROVAL OF THE CUSTOMER.
WITHOUT THE WRITTEN APPROVAL OF THE TESTING LABORATORY ZKRATOVNA SHALL NOT BE REPRODUCED EXCEPT IN FULL.

Praha 9, Běchovice

Description of the test object

An outdoor neutral earthing resistor for a purpose of controlling the ground of an alternating current system. The active parts of the resistor are manufactured from a stainless steel alloy. The resistor is equipped with a manually operated switch-disconnector.

The test object was identified according to the drawing No. 119032 Issue B – sheet 1 of 2.

Ratings assigned by the manufacturer

Type	:	RP
Serial No.	:	CR034553/2-1
Tag number	:	NER-11-BH1A
Design	:	SDS-6812
Manufacturer	:	Cressall Resistors Ltd, United Kingdom
Year of manufacture	:	2011
Rated system voltage	:	11 kV
Rated line-neutral voltage	:	6350 V
Rated frequency	:	50 Hz
Rated short-time current	:	400 A
Rated time for short-time current	:	10 s
Number of phases	:	1
Resistance at 25°C	:	15,6 Ω
Resistance at 54°C	:	15,8 Ω
Rated continuous current	:	0 A
Maximum element temperature-rise	:	760°C
Temperature coefficient of resistance	:	$0,36 \times 10^{-3} \text{ K}^{-1}$
Rated insulation level	:	75 kV (BIL)
Overall dimensions (width x depth x height)	:	1308 x 1409 x 1059 mm
Degree of protection	:	IP55
Weight	:	350 kg
Installation	:	Outdoor

Test specification

The test was carried out according to the customer's instructions. The test procedures, parameters and test assessment criteria are based on Test Acceptance Criteria – IP54 NERs Issue B dated March 16, 2011 by Cressall Resistors Ltd and IEEE 32-1972, section 4.6.

Test parameters

<i>Short-time current test</i>		
Test voltage	:	6,35 kV
Test current	:	400 A
Duration of test current	:	10 s

Summary

The test was carried out as required by the test specification. The test object **passed successfully** the short-time current test.

More details of the test performed are given in the enclosed tables and oscillogram.

Test conditions

Working frequency $f = 48,5 \text{ Hz} \div 49,5 \text{ Hz}$

The short-time current test was performed in a single-phase test circuit with a value of the no-load supply voltage of ca 6,5 kV.

The test object was connected to the test circuit by means of two Cu cables with a cross-section of 120 mm² each. The connection to the test circuit (earthed side of the test object) was earthed.

The thermocouples positions are documented by the photograph in Fig. 2

The test circuit, including measurement points, is illustrated in the diagram REV121.

The tests were witnessed by

Tony Harris, Cressall Resistors Ltd, United Kingdom
Richard Mobbs, Cressall Resistors Ltd, United Kingdom

Notice:

The test results relate only to the tests given in this Test Report. No documents of administrative, business or other character can be substituted by this Test Report.

List of symbols

a) Used in the table of test results

I_1	- test current at the beginning of the test (first period)
I_2	- test current at the end of the test ($t \geq 0,99 t_i$)
I_e	- equivalent value of test current, r.m.s. value
U_1	- test voltage at the beginning of the test (first period)
U_2	- test voltage at the end of the test ($t \geq 0,99 t_i$)
U_e	- equivalent value of test voltage, r.m.s. value
W	- total injected energy
t_i	- duration of test current
$\theta_1, \theta_2, \theta_3$	- temperatures on active parts of neutral earthing resistor
θ_a	- ambient air temperature
θ_{xi}	- initial temperature on adequate place
θ_{xf}	- final temperature on adequate place
$\Delta\theta_x$	- final temperature-rise on adequate place

b) Used in the oscillogram

I	- short-circuit current course
U	- voltage drop course
t	- time
$T1, T2, T3$	- temperatures on enclosure panels of neutral earthing resistor

The Test Report contains: **13** sheets i.e.:

- 1 introductory sheet
- 1 title sheet
- 3 text sheets
- 3 table sheets
- 1 test circuit diagram
- 4 photograph sheets

1 oscillogram

1 enclosure
